

MB4

The MB4 has a smaller footprint and screen size, allowing it to be used in more confined spaces, making it perfect for busy city roads where space is limited. It can also be used as a public information sign for vehicles and pedestrians. The LED boards used are the 19mm version, allowing a lot of information to be fitted per screen, on a smaller size panel.

Up to 24 characters per line

Four lines of text per page
(five lines via graphic package)

Character height from 9.5cm to 76cm

The LED boards used are the 19mm version, these are the brightest and widest lenses available
